

TEC SHORTBOARD

The torq TEC shortboard lay-up offers incredible durability with a lively flex pattern. The deck lay-up is 6oz and 4oz layer which allows the board much greater freedom of twist and flex. A 6oz deck patch ensures the same level of impact resistance, while the addition of a carbon filament stringer adds incredible longitudinal strength and response.

The base has a full length carbon strip and 2 layers of fiberglass, meaning the rail has four layers of cloth for extreme strength.
